Subject: RE: Mayflower oil spill and West TX response field costs
Date: Friday, April 19, 2013 10:49:50 AM

Eric,

RRGP will be responsible for replacing the sensors and cal gases upon arrival to the warehouse. The START contractors are responsible for replacing the items out in the field/on sites, if they need to be replaced to continue operation. Linda and I discussed the issue with Weston on Tuesday and they fully understand the responsibilities.

Subject: Mayflower oil spill and West TX response field costs

Anticipating use of all of R6's Area arrays' and multirays currently singed out to WESTON. Who will be responsible for replacing sensors and cal gasses upon arrival back to the warehouse? The air monitoring equipment is being used 24/7. Please advise.

Thanks
